### Product List

#### Antistatic Agent

Model	Function	Application	Packing details
5113	Antistatic Agent	5113 is a very efficient additive having a wide application spectrum on the plastics sector. It is suitable for many thermoplastic plastics, particularly for poly-olefines as antistatic agents, lubricants, slip and release agents. Being a nitrogen-free compound, 5113 has been compared with nitrogenase additives, considerable advantages with regard to color, smell and taste. 5113 is a non-toxic substance and is approved for plastics according to the food law regulations in many countries.	Plastic bag, 25 KG/PC, 20 PCS/pallet
683	Antistatic Agent	683 is an effective internal and external antistatic agent for a great number of plastics. With PVC, styrene copolymers it is primarily used as an internal antistatic agent. External application in solution is common practice especially for polyolefins. Treating plastics with 683 lowers their surface resistance and avoids troubles due to electrostatic charging.	Plastic bag, 25 KG/PC, 20 PCS/pallet
